CS3202 – Software Engineering Project submissions

All the reports that you submit should include all the given sections (structure) as of the template document given for the relevant assignment.

Do not include **plagiarism** in your reports. i.e. do not copy and paste text/ images from web as it is. You may get the idea and write it in your own words and cite the reference (since it is not your idea).

Write the reports using **report writing style** (avoid I, me, you). Write in a style in a way that you are submitting it to an actual client (not as a personal assignment submission).

When you submit an assignment, name the document with your index number followed by the project title.

The main objective of this course is to give you the experience of developing an actual software product. Therefore you should **meet all the given deadlines** for the deliverables. I.e. you have to submit each assignment on time and no late submissions are allowed.

Also all the assignments, guidelines, and deadlines were given at the beginning of the course allowing you to plan well ahead. You have 1 week of time to submit each assignment. So **do not wait till the last moment to submit** it. For example, if you were unable to submit a given assignment on time do not bring any excuses such as being ill, funeral, wedding, forgot, etc.

Make sure to submit all the assignments on time; it is possible to go down your final grade even from 1 mark.

When you use tools (to design diagrams, Gantt chart for scheduling, testing, analysis, etc.) and deploy the project in a web site, make sure those are **free or open source**. Otherwise, if you use a trial version, by the end of the module it may get expired and you may not able to access/ edit your data again.

When you include images in your reports, make them "in line with text" (picture tool bar → wrap text → in line with text) and include the caption accordingly. If you include two or more images together (in a row), group them.
